Secure 4G Connect

Keeping users securely connected in a more remote world

Connectivity has never been more important to the world of work. But as all businesses face significant changes brought about by a post-pandemic future, your connectivity needs now look very different.

With huge numbers of employees working exclusively or frequently from home, connectivity priorities are no longer just focused on the office. Yet many home workers are still experiencing poor performance, due to their reliance on contended consumer-based connectivity and increased household demand.

To stay productive and safe in a less secure, remote environment, this way of working is not sustainable in the longer term.

The solution to this new networking challenge is Convergence Group's Secure 4G Connect service, which takes the technology of a smartphone and maximises its potential - in the shape of a reliable, secure, off-premise (MPLS), corporate-grade solution.

Powered by Convergence Group

Tiviti 4G: a secure office, anytime, anywhere

Secure 4G Connect combines corporate-grade SIM cards, EE 4G network coverage, 4G-enabled routers and a full management and support suite, to ensure reliable, private business connectivity. This service should not be confused with consumer data sims, which simply provide access to the public internet.

Flexible and portable

Tiviti's 4G SIMs can be used in any 4G-enabled router, for more permanent connections, or in smartphones, laptops or other similar MiFi devices. Multiple devices can connect when the SIM is used in a MiFi device, which means it is an ideal solution for small offices or remote teams.

Robust and secure

Private APNs (Access Point Name) deliver secure connections from anywhere without the need for a VPN - while our ruggedised, corporate-grade SIMs can be deployed in even the toughest commercial and industrial environments.

Secure 4G Connect also routes user traffic directly into your corporate data network.

This provides your employees with more secure access to the systems, data and resources they would work with if they were physically connected in the office.

Fast and exclusive

Running on EE means access to the UK's best network coverage and bandwidth of any 4G network, and access to public APNs exclusively reserved for business-grade data traffic.

Our low-cost and high-performance Secure 4G Connect delivers savings compared to traditional ADSL connections, with instant WAN access and data transfer for any device, including IoT (Internet of Things).

Why Tiviti?

When you partner with Tiviti for 4G corporate connectivity, you get much more than hardware and software. You'll have the support of an expert partner with market-leading experience in business connectivity and a comprehensive managed service package, including:

Full support

If any problems should arise, the experienced Tiviti service desk and support team is on standby to help. Support is provided 24/7/365 for the most business-critical of problems, and troubleshooting of major issues always begins within 40 minutes of first contact.

Provisioning and testing

Our rapid deployment framework ensures a fast implementation that's a perfect fit for your business needs, while testing functions can ensure any network or IP issues are

addressed before they can have a real-world impact.

Transparent pricing

Tiviti Secure 4G Connect is charged monthly according to data allowances and private APN requirements. All SIM cards are provided free of charge, and connection fees for VRF and MPLS interconnect are waived for deployments of 50 SIMs or more.

Pricing and commercial details

The pricing plan, which enables you to take advantage of Secure 4G Connect, is broken down as follows:

Initial connection fee: This is a one-off connection fee to enable the secure MPLS interconnect. This is waived when you contract to a given volume of connections, as per the table below:

Has CG MPLS Network		
49 Sims or less	50-100 Sims	>100 Sims
£4,000	Free of charge	Free of charge

Monthly ongoing fee: This is a monthly fee for the provision of a private APN. Whilst most clients will only require a single private APN, the option exists for you to request multiple private APNs. The price per private APN is £19.99 per month.

Price per SIM: SIMs are provided free of charge and are subject to a monthly tariff as shown below:

100MB	512MB	1GB	2GB	4GB	8GB
4.99	5.99	7.99	10.99	14.99	23.99

Variable costs: All data coverage is charged at £3 per GB. This cost is in addition to the monthly tariff, and is charged on a per sim basis.
